FIRE VASE

The shape of a fire

Wildfire histories, made visible.

Fire 387635 / western region / 2018

Illustrative 3D rendering: cumulative normalized width, coloured by centroid gridMET VPD.

ONE FIRE

925
square kilometres

33
days of development

31
dated observations

READ THE VASE

Upward: development time

Width: cumulative growth

Colour: atmospheric dryness

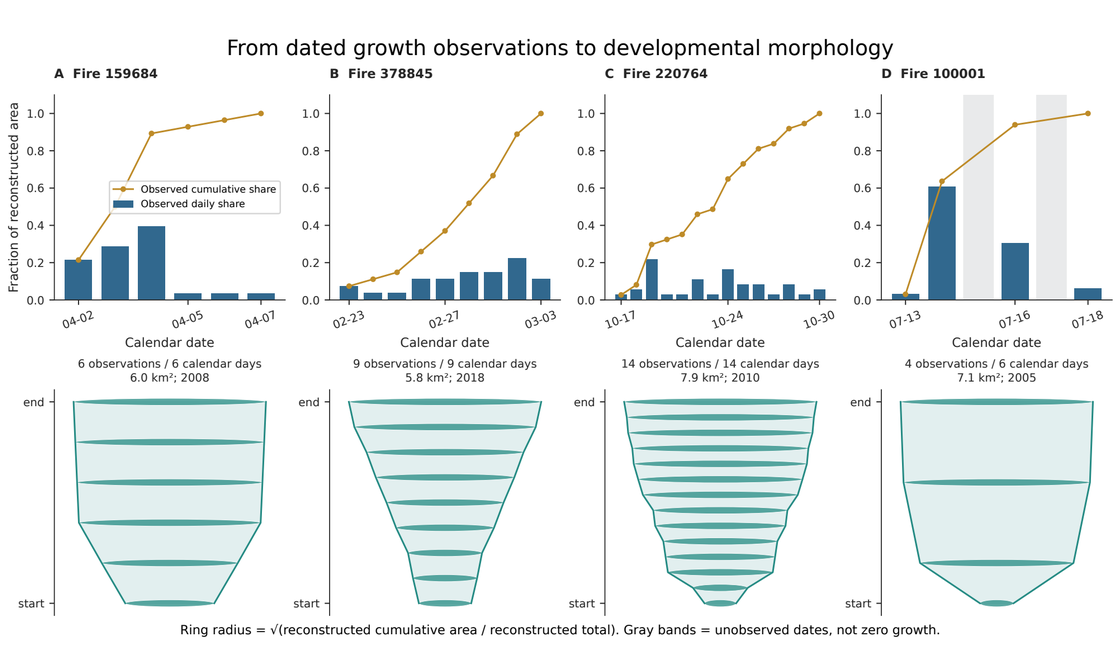

2.02 — 4.15 kPa

Daily vapour pressure deficit

Different histories. Shared coordinates.

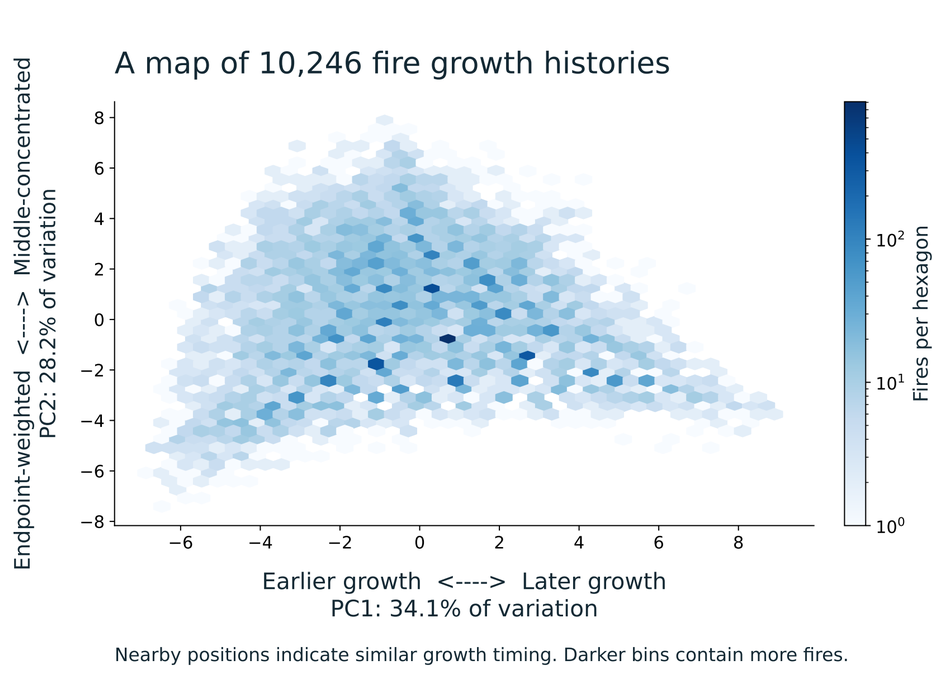

Current v2 results reveal continuous gradients in how fires allocate growth through time.

01 FROM OBSERVATIONS TO FORM

Growth observations become comparable VASE profiles.

02 A CONTINUUM OF DEVELOPMENT

Two main gradients explain 62.4% of variation.

Broad gradients are supported; these are not established natural fire classes.
