

From dated growth observations to developmental morphology

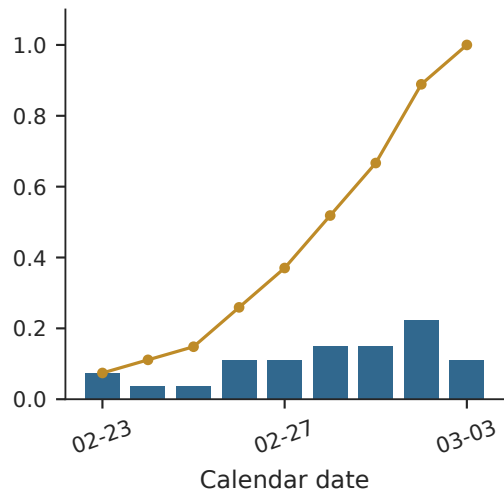

A Fire 159684

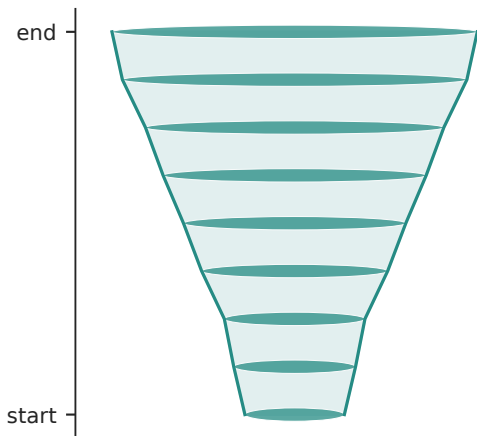

6 observations / 6 calendar days
6.0 km²; 2008

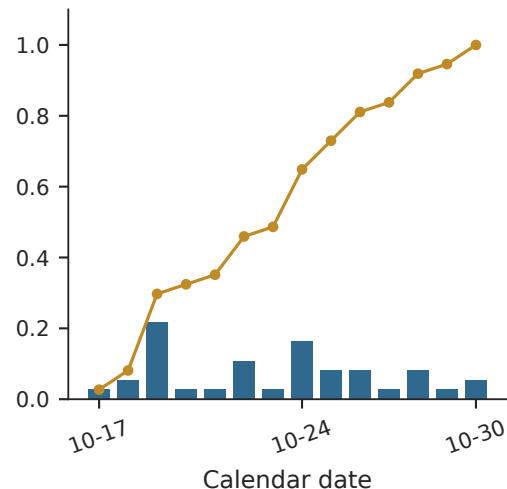

B Fire 378845

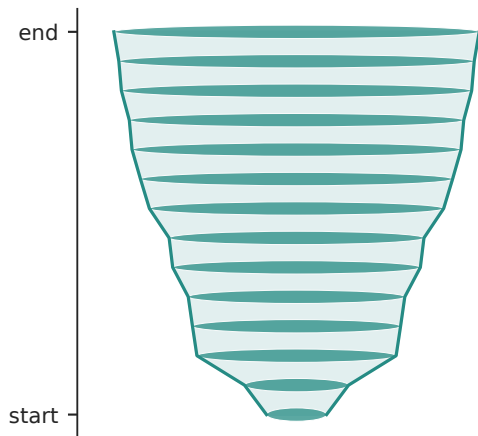

9 observations / 9 calendar days
5.8 km²; 2018

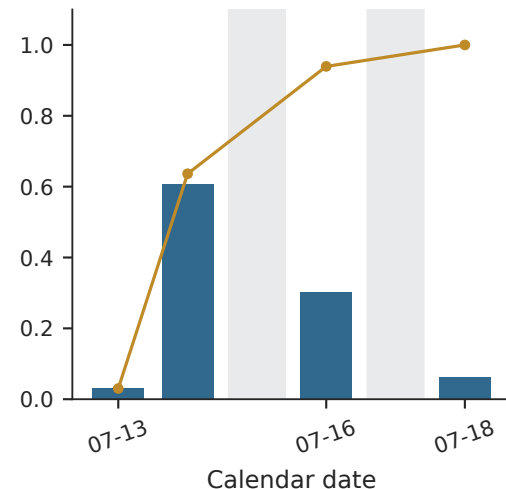

C Fire 220764

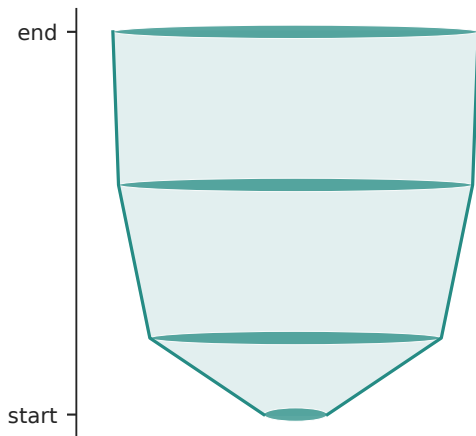

14 observations / 14 calendar days
7.9 km²; 2010

D Fire 100001

4 observations / 6 calendar days
7.1 km²; 2005

Ring radius = $\sqrt{(\text{reconstructed cumulative area} / \text{reconstructed total})}$. Gray bands = unobserved dates, not zero growth.
